Your Investment Performance

How to read the table and charts

VIEW YOUR PERFORMANCE

In the table below and when you view charts, your personal rate of return is calculated with a time-weighted formula. The calculated value reflects the result of your investment selections as well as any activity in the plan accounts shown. The personal rate of return is an estimate only and should not be used solely in making investment decisions. You cannot invest directly in a benchmark and benchmark returns may not take into account your same investment contributions, exchanges and other cash flows which makes comparisons with your personal returns difficult. There are other personal rate of return formulas used that may yield different results. Remember that past performance is no guarantee of future results. Also, please note that your Personal Rate of Return may be positively impacted by certain non-market related account adjustments including payments related to settlements and restitutions. Click on an investment to view its performance including quarter-end returns, risk, fees and expenses.

This page shows a performance summary of all the investments in your plan. The investments you hold are marked with a check-mark icon. Click an investment to view quarter-end returns, risk, fees, and expenses.

The performance data featured represents past performance, which is no guarantee of future results. Investment return and principal value of an investment will fluctuate; therefore you may have a gain or loss when you sell your shares. Current performance may be higher or lower than the performance data quoted.

You may lose money by investing in a money market fund. Not all money market funds operate the same way and depending on the fund, you

may be subject to certain operating policies and risks not applicable to other money market funds. Please click on the name of the fund below for risks specific to that fund.

Average Annual Total Returns Cumulative Total Returns Daily Quotes Fees Restrictions

Average annual total return is a historical rate of return that, if achieved annually, would have produced the same cumulative total return if performance had been constant over the entire period. Average annual total returns smooth out variation in performance; they are not the same as actual year-by-year results.

Investments you currently hold This option is frozen from further investing

Total returns are historical and include change in share price and reinvestment of dividends and capital gains, if any. These figures do not include the effect of sales charges, if any, as these fees are waived for contributions made through your retirement plan. If sales charges were included, returns would have been lower.

* Performance provided is Life of Fund, which is since the inception date noted, when the investment option has been in existence for less than 10 years. Life of fund figures are from the inception date to the period shown. Long-term fund performance returns (e.g., 1, 3, 5, 10 Year) may not be available due to the fund inception date. For unitized funds, the inception date shown may be that of the fund's underlying investment option. For non-mutual fund pools and trusts whose strategies may be offered to multiple clients and whose returns may be based on a composite, the inception date shown may be the beginning date of the composite's returns.

Daily return information, including MTD (Daily) and YTD (Daily) returns are calculated by Fidelity, using NAV and distribution information provided by third party providers, including, but not limited to: Investment Managers, Morningstar LLC, Plan Fiduciaries, Third party Trustees, Issuers and other outside entities. The daily returns calculated by Fidelity may vary slightly from the non-daily returns calculated by the third party providers for similar time periods. The official returns offered by the third party providers shall constitute the final returns for the investment options.

The analysis on these pages may be based, in part, on historical returns for periods prior to the class's actual inception. Generally, these calculated returns reflect the historical performance of an older share class of the investment, which may be adjusted to reflect the fees and expenses of the newer share class. Pre-inception returns are not actual returns and return calculation methodologies utilized by Morningstar, other entities and the investment option may differ. Pre-inception returns generally will be replaced by the actual returns of the newer share class over time. Please click on dedicated web page or refer to the fund prospectus or plan information for specific information regarding fees, expenses and returns.

Generally, among asset classes stocks are more volatile than bonds or short-term instruments and can decline significantly in response to adverse issuer, political, regulatory, market, or economic developments. Although the bond market is also volatile, lower-quality debt securities including leveraged loans generally offer higher yields compared to investment grade securities, but also involve greater risk of default or price changes. Foreign markets can be more volatile than U.S. markets due to increased risks of adverse issuer, political, market or economic developments, all of which are magnified in emerging markets.

** For an investment option, the expense ratio is the total annual fund or class operating expenses (before waivers or reimbursements) paid by the fund and stated as a percent of the fund's total net assets. Where the fund is not a mutual fund, the figure displayed in the expense ratio field is intended to reflect similar information. However, it may have been calculated using methodologies that differ from those used for mutual funds. Mutual fund data has been drawn from the most recent prospectus and has been provided by FMR LLC for Fidelity mutual funds and Morningstar, LLC for non-Fidelity mutual funds. For non-mutual fund investment options, the information has been provided by Morningstar, LLC, the trustee or plan sponsor. When no ratio is shown for these options, it may be due to the fact that none was available, or in the case of non-unitized company stock funds it is not applicable. Nevertheless, there may be fees and expenses associated with the investment option.

Before investing, consider the investment objectives, risks, charges and expenses of the fund or annuity and its investment options. Contact Fidelity for a free prospectus and, if available, summary prospectus containing this information. Read it carefully.
